

Tutorial 2

1-sep-2025

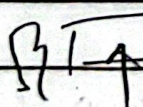

make it switches
not button

So we basically had to group and design
an auditorium switchboard
metaphors → tells us kya hoga

the staircase tells us kya hoga

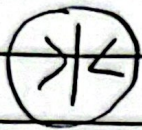

- affordance → design speaks itself how to
use it

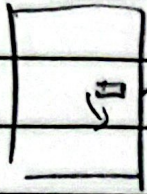

slider can be
perceived as row
or can be perceived as brightness

- natural mapping → how is it mapped
humanly

We can make buttons vibrate

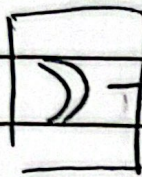

Lift buttons : this is metaphor

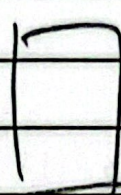

affordance: door knob

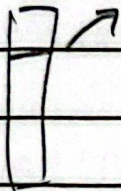

If door has a weird knob,
then its bad (we dont know
what to do)

pull

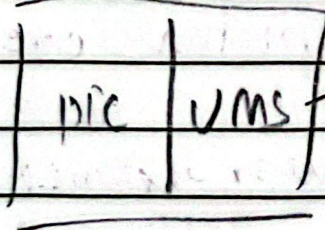

handleless
push.

do we pull the cap or
rotate the pen?

our main motive is to make it high
fidelity and people who give review,
the design speaks itself

- dont clutter a screen.

our assumption: click
link to open website
but its actually click
the picture to open.
