

25-Aug-2025

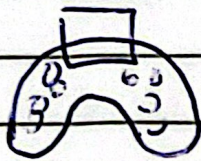

user

- how ~~computer~~ interacts with computer
- aik class ka bacha is dependent on smart phone

Game

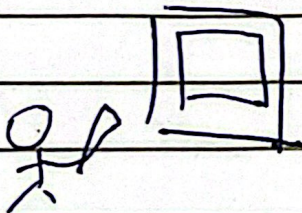

It has control buttons
monochrome, black, white
8-10 shades

This is upgraded
more buttons
color, more action

- we thought linearly, mono color

no button

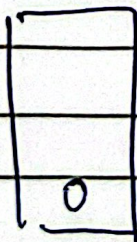

gesture

opponent is on other
place

could be speaking other languages
can understand each other

don't know each other

We went into multiple directions

clock

computer alarm

akhir kia cheez hai iss mein itna
evolve hone ke liye?

flexibility

acha design

- good input
- handles mistakes

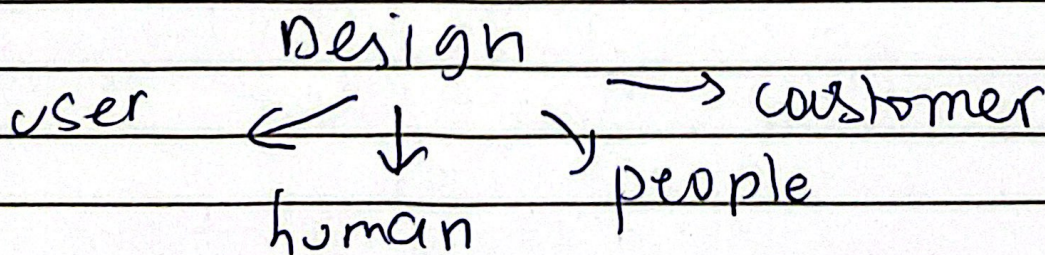

- an alarm was only designed to run
alarm

- clock only shows design

- computer is multi use

- power of computing speed, ram
of doing things
of communication internet
cloud

of new interface

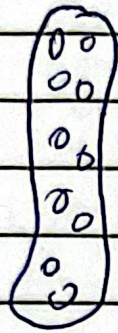

we call this UI/UX

how we use this interface

Interactive design course

TV remote

- har jagah koi na koi khush hai koi masla
- so we discuss user feeling
- kuch bhi ho, human has a reaction

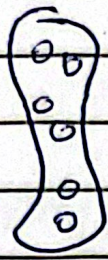

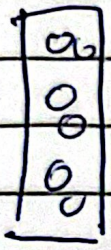

- so I have a bag, I like or no like
- choice is in design

simple ←
strap ↓ size
color

- i get choices, options
- this TV remote is good design

peanut shaped ← ↓ → most used button is centered and big
fits hand and buttons
- doesn't edge hurt buttons
- but look is good more used buttons are big

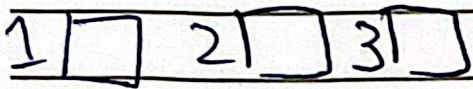

- backpack sits equally on both shoulders
- we want CONVENIENCE, EASE, LAYOUT, LOCATION

Both have same functionality but one has convenience case layout which other doesn't.

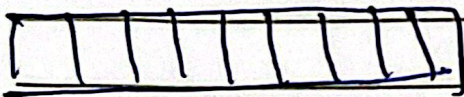

THIS IS GOOD DESIGN

BAD:

lift designs

the user presses

the button next

to 3 but it's

↳ buttons

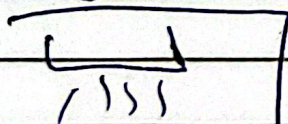

actually label

as button

- pressing a button multiple times doesn't make lift faster

- no turbo engine

- gach mein accelerate option hai

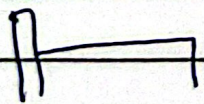

so 40°C room mein 16°C

AC and 40°C room mein

25°C AC, which room

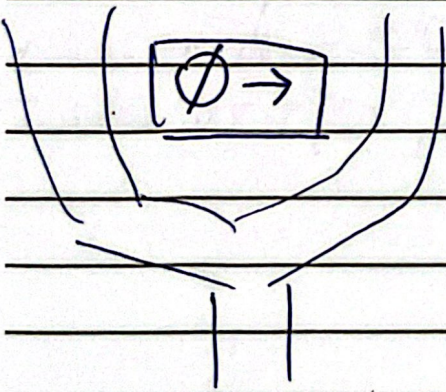

will be colder fast?

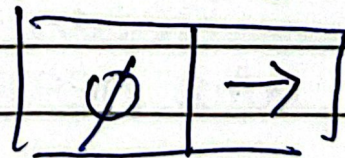

16 doesn't have turbo engine
doesn't make room folder
MIS idea comes from fridge, freezer

BAD

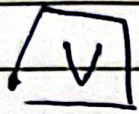

so mis vending machine goes into sleep mode and to activate press any button. function is amazing but it doesn't capture attention because it's asleep

so mis is a sign you are at 60 km/h which side do you go it means left na Uao, right Uao better design is

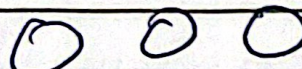

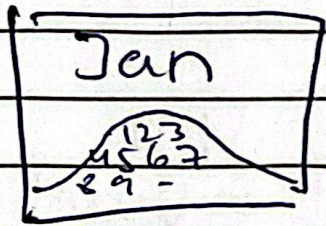

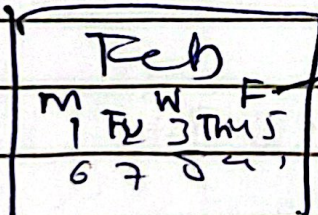

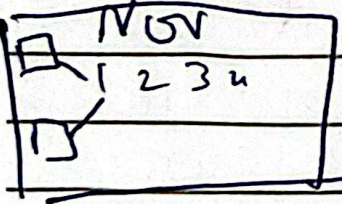

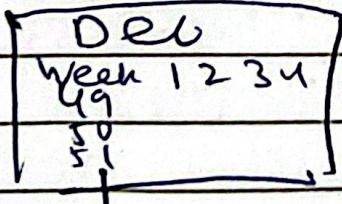

helps us understand

 → volume up

 → volume down

this is confusion, unable to understand!

  all buttons are
  in same size
  can't find in
 and here

  → why is
 day names
 up down
 
 needs gap
 who needs this

 Passport
 too much data

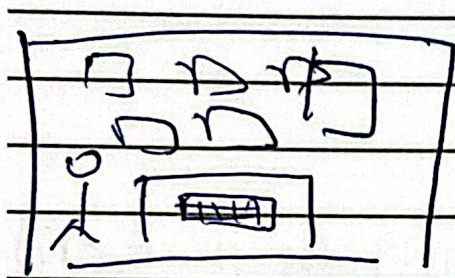

HUDSON
PHARMA

user does not need the data

jaldi mein we are asked
passport number

we can't find it jaldi mein
agar passport no. Mora bara
aur right pe likha hai to no
ink difference but ease

first desktop/comp
(inventor of mouse)
screen
can be addable in
home

- this is outdated
- so many buttons behind
key board on table
- screen on roof
- punched keyboard
- typewriter, difficult

Marble Answering Machine
