

27-Aug-25

- if you need a manual to understand every screen then it's not a good user system

① based on every day objects
bhat anokha nahi

② pleasure to use

③ benefits

ATM

swipe / security — money giving keypad and replying functionality keypad is diff.

learnt once, remember for later

- game when is easier than studying
- games in education (gamification)
- programming

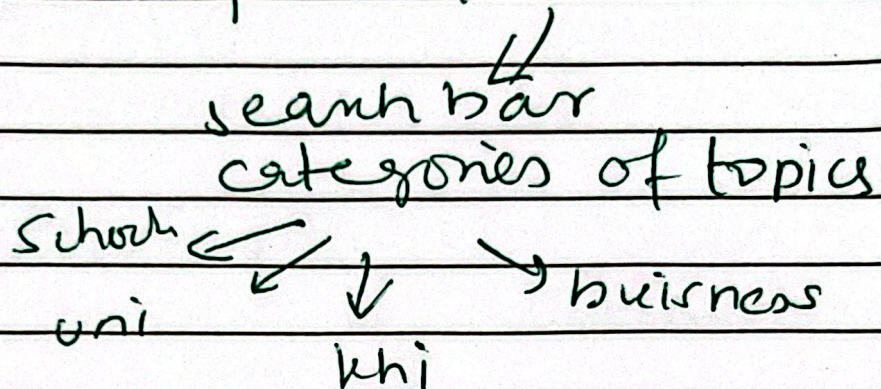

lecture ↓ test → do to n
lab ↓ exam → back

most learnt
and most involved

- we do multitask when we are bored

- game
- cut copy paste in excel
- online shopping
- social media
- update status

Google se pehle Yahoo

structured information

browse if you want

karachi info

don't search, browse

So google came and said browse
band karo, too much data
don't waste time
only keep search bar.

but when youtube came, there
was trillions of videos, we can't
pick what we want, so we
browse

- 0 → up / down / left / right

- dada dadi → recommendations
 can do it aayaayen
 "si" se sitare Zameen
 per

- hum are good GVI

what to do?

- we pick more uncomfortable by case
- poor duniya is digital / AI
- all activities are digital

← bills online bhado
food delivery

- rewhitnizeed pay ATM
- gharab has QR code and can just scan to donate etc
- google pay

- FRAUD

- people still do cash

← don't trust ↓ don't know
how
machine nahilati

- ab humne kea design rakhi hai

- ex customer care band kardo, sab online kardo

- everyone had a phone
- but for electricity, even people who don't have phones, still need electricity
- Karachi mein 1930 mein electricity aya thi
- London/England mein 1887 mein aya thi
- need to understand users

use psychology

- ① Who are my users?
 - ② How will it be used?
 - ③ Interaction kahan hoga?
- where does it click for activity

GOALS

- good design
- develop good product
- Kitna % use karne hain? $< 5\%$
95% is good, but people don't like it
- users like easy to use
- ishtedad se use it

UX → user experience design

{ look at theory includes }

- work with someone who has domain knowledge
- computer becomes our software point

Ubiquitous computing

→ computers everywhere

→ i want to do anything, i get a screen

→ poor system zindagi ka is screen

Human Factors

→ table height

→ screen color / brightness

multi teams = many domains

Konsi companies are HCI??

- Ideo, many interfaces for windows 11

- Cooper

- Nielsen & Norman

look at
websites

- people centered design
(user)

HOW do we make user experience?
how do we make it successful?

Steve Jobs → iPod promoted

mp3 player

"thakhi" hwi product

- sony etc were producing mp4 players which showed videos, better battery, etc.

- ipod had worse functionality and hardware etc

- what did Steve do that iPod sold more?

- even nokia and samsung were king but ipod went higher

- blackberries sold because of

buttons, keyboard, typing

difficult but people did because

other people did it

- fish is cut in half to fry as parents did it

- people follow trend
- social experiment → Farhan
- motivational speaker
- nallaay ke andar jukh kar dekh raha
- someone came, he said neech dekho and abot came and half an hour later it's still there
- his is herd mentality
- we follow

- iPhone had no button
- blackberry has all buttons
- iPhone said all I need is wifi and you download your app
- iPod can be synchronized with your iPhone family
- iTunes, subscription model
- old boys

What did user want?

- user ki chanta
- user kahiin kuch kaam kar raha → I listen to music
- transfer to laptop etc

- became instant hit
- users should be involved throughout the project
- doctor patient approach
 - ↳ yeh diwari khaalo
 - ↳ yahan dabba lo
- systems may change but user doesn't
- What are the specific goals the user wants to do?

① Accessibility

- if I develop a software for a group, I don't know kya background hai
- agar mein yeh samjhoon ke aik hi dawaaji sabka elay hai then it doesn't exist
- I don't know if the users are culturally different, disabled etc

② Inclusivity

- addressing disability
- ex audhokar m banate hain, we think of wheelchair, blind

- how do we cater to them
- the audi should be disable free
- no steps, ramps
- path for blind
- damage are big for wheelchairs
- aisle spaces are big
- now m/s place is accessible for disabled
- still it is not inclusive

ramp pe [↙] must be strong enough or electric to move

- door is only half open, need to ask someone to open
- need to sit on ramp or at subse aage

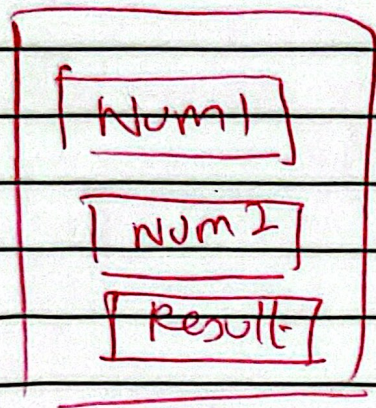

accessible means damage itna ho khud hi aajaye
 agar woh shak khud hi aaram se beth jaye → that's inclusive

- shun hi no chairs for wheelchair
- so some place can be

WHEELCHAIR FRIENDLY
 this is accessible
 but its not inclusive

- so we want accessible and inclusive

- naham ghatti hosakthi hai

This is a two no. adder calculator

- color blindness

- ex RED is unity, (China) danger (USA), ~~had~~ prosperity (India)

- so culturally things can be diff

- so the colors I pick maybe biased / masle

- phone ka size

- so many challenges

- physical barriers

- Lifting your finger ring without lifting others is a disability

- anything your ring finger touches, others will too

- technology is designed to accommodate all disabilities

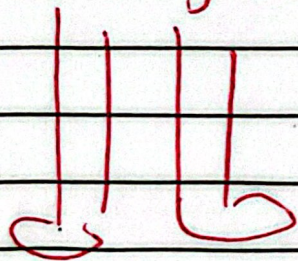

- OTP arrived in 10 seconds for a fractured arm

5 senses

→ touch → smell → taste
→ feel → hear

- physical
- cognitive → ghusa ayega
- aise khar dekha kar
- may be permanent, temporary, situational
- ↳ kahan ne nahi suna

- design something cool

design a cool high for prosthetic legs

cultural difference

mm/dd/yyyy

dd/mm/yyyy

cultural diff

→ so how to cater? use month tent, reserved

Door visibility

- good but not useable
- not detachable, hidden
- lift doesn't work. why? because you need to swipe card
- it's a good feature
- but no instructions on what to do
- there should have been clear instructions of please swipe to activate lift

automatic faucet

✓
ex doesn't work for black clothes
so you need someone else
what is the alternate to this?

ex you press a key, nothing happens
so it should make a sound
or show something

em something of this machine is
very far → it should be grab

- make it near buttons

Consistency

Ctrl C / Ctrl V / Ctrl S

if I change it in my system,
the user will react

phones

Calculators

1 2 3
4 5 6
7 8 9
0

7 8 9
4 5 6
1 2 3
0

WHY?

In calculators you have bigger
numbers so you don't start with
0, so it comes beech mein
- and in phone no. 0 comes
first

Affordness

- when you see something, it
gives you a clue
- ex stage de lakhi ka tuqra,
ho clue but tuar hai electronic

- design objects give some idea or affordance
- kettle ka handle is available
- anyone who knows uses the handle
- User starts my application from this point
