Perception by experience

- I know something by past so my mind thinks that way and makes me do that

NEXT BACK

↑
our mind has
experience of rent
at light.

Perception by Content

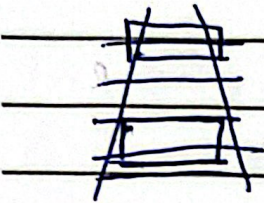

THE CHT

perception in the current situation / context
Fold napkins. Polish silverware. Wash dishes.
French napkins - Polish silverware. German dishes.
polish in second is german etc city
even if content changes would be same.

Perception by goal

- we find goal / scissors in a picture even though it's different
- on university site for computer science page dropdown menu, we ignore other things
- so in these perceptions, we have to make sure user is not troubled.
- such bias has to lay back to the user.

- koshish karein ambiguous cheezain na daalein
- be consistent
- 3D buttons are not impressing, use 2D.
- understand user ke usske goals kya honge
- due to perception, we have illusion

both rectangles are same size. Lines are equal.

- we can read jumbled up selling → experience
- we ignore meaningless words.

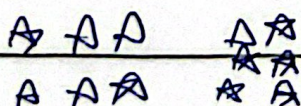

↓
context

- a bird in the tree bush → our mind ignores them → context
- use background to show a word
- so bias always takes input

Gestalt Principle

- a set of design/rules/principles that we can use and apply.

① Proximity

so cut using horizontal and vertical

- whatever we want we're to look at first, we put at top right
- our mind groups things that are close to each other.

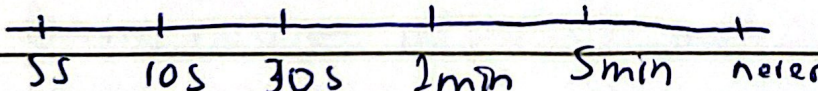

② Similarity

 So some stars are different
 but some overall

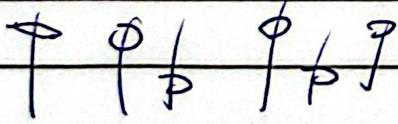

within a group we further subgroup.
 ex phone number boxes are broken into 2.

⑤ Continuity

- we use past bias to fill images etc
- ex I have a slider

the increment is not equal

 I have meters, I assume all level increm. are same

④ Closure

could be pacman or coms

- I try to create a complete image

continuity is the study of filling
closure is adapting to what's made

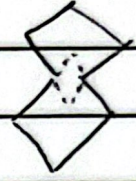

⑤ Symmetry

they are on
top of each
other

but they can't be here.

⑥ Figure Ground

- if a small obj comes inside a big obj
then the big obj is the background

⑦ Common Fate

- some obj are moving but so symmetrical
in one style in one direction so we perceive
all are missing

⑧ Combined

- so we combine all the principles here
