

8-sep-2025

- Q. Fluid mein awaaz nahi aarahi at multiple places

put a speaker where less voice

audience lagado with speakers and it goes to the place with less noise

this is very impractical

- example left chairs ko sabse kone mein daaldo — not fair

- interview lefthi — what do they actually want?

↳ is the solution that comes to you correct?

↳ it all works gradually

- when careem released, sitting in the car was the biggest challenge. culturally and safety.

- so what did they do? track my ride. SOS button.

- ex automate waiter serving food

- they made a robot. but they put upshdu

and a scarf which did gender bias

- what is the problem?

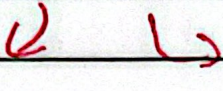

it entertains customers and takes orders

- how would it move?

- mechanical voice or

- human aural voice

- do customers like it?

 would they come back? is it working or annoying?

- ex highway par restaurants mein made chhaya - which made kids to mil. annoying for parents.

- food serving design 2: make a tray robot which carries trays - no fuel / gender etc.

 we need to first do investigation.

- ex paani leak

→ put bathyan

→ drainage system

→ put a pipe on roof so that around the building it collects

and goes down

→ heated floors

→ coating on roof to not let water seep inside.

- so we can think of many ideas, not all are practical.

Claim

POC model

→ something stat's true but it is still open to question

- ex 'jab multan mein robot laga, people came to admire but after 3 months no one was interested

- many people need to operate the robot

- so make sure to investigate

- ex 3D TV at home. but the accessories (3D glasses), the brightness goes down, brain has to do extra work. so i'm not prepared for it

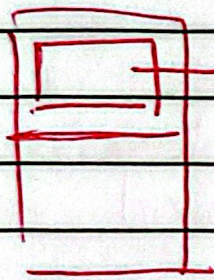

- ex 3D projector in university class, why it didn't work? we are not in the mind to watch & enjoy - we want to write, understand, argue.

am I actually solving an issue here?

- ex projector audi mein lagana
is ~~hard~~ hard, that's a problem. but
2D TV is not a problem.

or are we making more problems?

do they want a proj or an assembly?
talk to user - what is needed?

fridge par we add a TV taake
khaana pakate have TV dekhlein,
not good - orient re kara.
users were not ready for
it.

BUT they wanted a smart TV that
they could use for youtube

- so you must CONCEPTUALIZE
- you must address problems
- find a common ground

- ex ~~car~~ electric cars/bikes - no
charging ports. so add 2-4
chargeable batteries. hybrid cars.

conceptual model

high level description of how a system is and organized

metaphors → using simple examples to explain

- hybrid battery → analogy → need to explain via car.

step ① → ask users how they perform their task

- we develop a workflow system
- pehle kya hua, phir kya hua.

interface metaphor-

→ searching internet

→ shopping cart.

→ kiosk at mcdonalds & concept

→ google news

is same

but

implementation
diff.

Method of Interaction

① instructing

② conversing

i have a model to converse with me

✓
can be problematic
home systems can be
different.

③ manipulation

--> direct, indirect

④ exploring 3D AR VR

⑤ responding
